

Functions Practice

```
def areaRect(length, width):  
    ans = length * width  
    return ans
```

Circle the **function's name**

Underline the **parameters**

Draw a box around the **output**

Draw {} braces around the **processing** section.

This function's name is _____. Its parameters are _____ and _____.

This function (circle one) **prints the answer** or **returns** the answer.

An example of **calling** this function is:

and the result would be:

Give another example here, with the result:

Functions Practice

```
def funkyWord(word):  
    aWord = word.upper()  
    bWord = word.lower()  
    cWord = aWord + bWord  
    print(cWord)
```

Circle the **function's name**

Underline the **parameters**

Draw a box around the **output**

Draw {} braces around the **processing** section.

This function's name is _____. Its parameter is _____.

This function (circle one) **prints the answer** or **returns** the answer.

An example of **calling** this function is:

and the result would be:

Give another example here, with the result:

Make a function named `minny` that takes in two numbers and **returns** the smaller one.

Functions Practice

This function's name is _____. Its parameters are _____ and _____.

This function (circle one) **prints the answer** or **returns** the answer.

An example of **calling** this function is:

and the result would be:

```
def _____( _____, _____):
```

```
    return
```
