

Processing Shapes, Sounds and Text Homework

Question 1

In Processing we can use the `point(x, y)` function to draw a dot onto the output screen. If we set our screen size to 900px by 600px and we draw a dot at position (100, 100) then where is the dot going to appear? In the top-left, top-right, bottom-left, bottom-right or middle?

Question 2

What function can we use to change how big the dot is? What function can use to change the color of the dot?

Question 3

Why does using the `fill()` function not work when trying to change the color of a dot or line?

Question 4

In your own words explain what `Minim` is and why we use it. What is one sound file type that you used in the past?

Question 5

Write some code to draw a circle and four rectangles inside the circle. You can decide on the size of the shapes and color. You then need to have a title for your work of art so add some text to the top that says whatever you want.
